DETAILED ACTION

Response to Arguments

1. Applicant's arguments, see pages 6-10, filed July 17, 2009, with respect to claims 1, 5-7, 13, 19, and 25-30 have been fully considered and are persuasive. The rejections of the claims have been withdrawn.

Claim Objections

2. Claims 25-28 are objected to because of the following informalities: These claims are objected to since they depend on a canceled claim (claims 20 and 21). Appropriate correction is required.

Claim Rejections - 35 USC § 101

3. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

4. Claim 7 is rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

Regarding to claim 7, the claim recited for "a program storage device readable by a machine..." and such program storage device is not clearly and explicitly stated in the specification and the claim to exclude transitory storage device such as electromagnetic signal or carrier wave. And claims that recite nothing but the physical characteristics of a form of energy, such as a frequency, voltage, or the strength of a magnetic field, define energy or magnetism, per se, and as such are nonstatutory natural phenomena. O'Reilly, 56 U.S. (15 How.) at 112-14.

Art Unit: 2467

Allowable Subject Matter

5. Claims 1, 5, 6, 13, 19, 29, and 30 are allowed.

The following is a statement of reasons for the indication of allowable subject matter: The prior art of record fails to teach or make obvious the steps of or means for "a peak performance rate as the highest rate at which packets can be sent from the packet generator to the packet count unit with no packet dropout", when such rate is considered within the specific structure of the method recited in claim 1 or of the device recited in claim 13. The prior art of record fails to teach or make obvious the steps of or means for "a peak performance rate of said network under test is established as the maximum receive rate at a particular packet size with no packet dropout", when such rate is considered within the specific structure of the device recited in claim 19.

Conclusion

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Duc T. Duong whose telephone number is (571)272-3122. The examiner can normally be reached on M-F (9:00 AM-6:00 PM).

Application/Control Number: 09/922,520 Page 4

Art Unit: 2467

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Pankaj Kumar can be reached on 571-272-3011. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
